

Short Term CS Issues

Wael Elwasif

Oak Ridge National Laboratory

Where do we go from here?

- “Populating” target platform(s).
- “Exercising” the component design, and component framework interaction.
- State / Services / File Format Issues

How do we get there?

- Need to get codes onto PPPL platforms. An installation (see Bramley's "What CS needs from developers now" list)
- RF example of full set of scripts and files to run AORSA from Lee (should be in some form next week).
- How far down onto the machine stack can we push the higher level scripting capabilities onto jaguar in particular. Will our Python work there?
- Refine and generalize build system.

Yet More Questions

- Simulation targets specified as workflows - something on the level IPS driver from Don's design document.
- Related to last item: order of componentization. Eg.
 - AORSA
 - CQL3D
 - TORIC
 - then what?
- How to handle batch waits with multi-executable jobs on normal, sane systems?.

Possible Routes

- An expanded (and extended) (≥ 3 days?) coding camp?. When?
